

## **VISION PRODUCTS – WEEE & ROHS COMPLIANCE**

VISION PRODUCTS have spent a considerable period of time investigating and discussing the requirements of the statutory WEEE and RoHS directives in addition to consultations with our selected professional advisors, ElectroLink.

Where Vision products currently fall within the scope of the WEEE/RoHS directives they are fully compliant and registered.

In addition, where possible, Vision products that fall outside the scope of these directives are also manufactured to comply with the WEEE/RoHS directives for electronic products even where they are intended for fixed installation by professional installers and are therefore presently exempt.

VISION PRODUCTS takes its environmental responsibilities very seriously and as a result it is the view of the business that where it is possible we will endeavour to exceed the legal requirements to minimise the use of lead and other potentially harmful substances in our products.

R. Stallworthy – Product Manager
